CMAXX WIFI SOLUTIONS

Cloud & Microsoft 365 Services

Website Restructure, SEO Content Architecture and Developer Implementation Brief

Complete parent-page copy, child-page structure, educational content, internal linking, FAQs, conversion requirements and technical SEO instructions.

Prepared for	CMAXX WiFi Solutions
Document status	Final website developer brief
Version	1.0
Date	27 August 2026
Current page	https://1124817.eu9.myftpupload.com/cloud-microsoft-365/

Primary decision

Keep the existing Cloud & Microsoft 365 URL as the parent hub page. Rebuild it completely, then add five focused child service pages beneath it. The parent page must educate, guide and convert; the child pages must target specific customer needs and search intent.

This brief is a content, marketing and website implementation document. It is not legal advice, a Microsoft licensing agreement or a guarantee of Google rankings.

CONTENTS

How to Use This Brief

The document is arranged in build order so the developer can move from strategy to implementation.

The parent-page website-ready content in Part 6 can be implemented directly. The child-page blueprints in Part 7 should be built as separate, indexable service pages with unique copy. The final sections provide technical SEO, design and publishing controls.

Part	Content
1	Executive Direction and Final Recommendation
2	Current Page Audit and Required Corrections
3	Final Information Architecture and URL Structure
4	Audience, Positioning and Conversion Strategy
5	SEO, Internal Linking and Technical Requirements
6	Parent Page: Full Website-Ready Structure and Copy
7	Five Child Service Page Blueprints
8	Design, UX, Accessibility and Brand Requirements
9	Developer Publishing Checklist
10	Reference Sources and Accuracy Notes

Build rule

Do not paste the same paragraphs across the parent and child pages. Each child page must answer a narrower customer problem in greater depth. The parent page should summarise each service and link to the relevant child page.

1 Executive Direction and Final Recommendation

What the website should become and why.

1.1 Final recommendation

The current page should not remain a single shallow service page. It should become the central Cloud & Microsoft 365 hub for CMAXX, supported by five focused child service pages. This gives customers a simple overview while allowing each important service to be explained properly and targeted to its own search intent.

REQUIRED WEBSITE HIERARCHY

Parent page: Cloud & Microsoft 365 Services

Child page 1: Microsoft 365 Setup & Migration

Child page 2: Microsoft 365 Support & Administration

Child page 3: Microsoft Teams & SharePoint Solutions

Child page 4: Business Email & Exchange Online

Child page 5: Business Backup & NAS Storage Solutions

1.2 Why this structure is appropriate for CMAXX

- It positions CMAXX as a business technology and managed-services provider, not only a once-off installer.
- It gives customers plain-language explanations before introducing technical terms such as tenant, Exchange Online, SharePoint, RAID and NAS.
- It creates dedicated landing pages for high-intent searches such as Microsoft 365 migration, business email setup, Microsoft 365 support and NAS backup in Gauteng.
- It gives Google a clear internal-linking structure and enough unique topical depth to understand each service area.
- It creates natural monthly-service opportunities for Microsoft 365 administration, user management, backup monitoring and ongoing support.
- It connects CMAXX cloud services to the company's networking, WiFi, cabling and security capabilities.

1.3 Build priority

Priority	Page	Reason
1	Parent: Cloud & Microsoft 365 Services	The hub page must be rebuilt first so all child pages have a clear parent and conversion path.
2	Microsoft 365 Setup & Migration	Strong commercial intent and the clearest entry service for new and migrating businesses.
3	Microsoft 365 Support & Administration	Supports recurring managed-service enquiries and ongoing client relationships.
4	Business Email & Exchange Online	Matches the language many SMEs actually use when searching for professional company email.
5	Microsoft Teams & SharePoint Solutions	Addresses collaboration, permissions and document-management needs.
6	Business Backup & NAS Storage	Creates a distinct data-protection and local-storage service page.

Do not over-expand yet

Do not create separate pages for Word, Excel, PowerPoint, OneDrive, Planner, Forms, Intune or every Microsoft product at launch. Create additional pages only when CMAXX has a real service scope, customer demand, expertise and enough unique content to justify them.

2 Current Page Audit and Required Corrections

What is working, what is missing and what must be removed or rewritten.

2.1 Current-page snapshot

The current page has a clean visual direction and three simple service cards. However, the service descriptions are too brief for a customer who needs to understand the difference between Microsoft 365 setup, collaboration administration and backup/storage. The page also needs stronger conversion, technical scope and internal linking.

Current service-card section supplied by CMAXX. The visual layout can be retained in principle, but every card must link to a full service page and the supporting content must be expanded.

2.2 Strengths to retain

- Clear headline focused on Gauteng businesses.
- Simple three-card overview that is easy to scan.
- A migration-process section that can be expanded into a more complete customer journey.
- Strong use of CMAXX navy and orange brand colours.
- A direct consultation call to action.

2.3 Problems and required fixes

Issue	Why it matters	Required correction
Service depth is too thin	Customers cannot understand scope, differences, risks or outcomes from a few sentences.	Add plain-language education, detailed scope, decision guidance, process, FAQs and links to child pages.
Only three service categories are shown	Ongoing administration and business email are major commercial services but are not visible.	Add Microsoft 365 Support & Administration and Business Email & Exchange Online.
Absolute claim: "No data loss"	No responsible migration provider should present zero risk as an unconditional guarantee.	Use: "Carefully planned migrations designed to minimise disruption and reduce data-loss risk."

Issue	Why it matters	Required correction
Absolute claim: "POPIA-compliant"	Technology can support compliance but does not automatically make a customer compliant.	Use: "Configured to support your organisation's security, privacy and POPIA responsibilities."
Duplicated sections	The live page repeats the "Why Microsoft 365?" block and CTA.	Keep one strong benefit section and one final CTA; remove duplicates.
Unverified counters or performance claims	Metrics such as seats managed, uptime or migration turnaround can mislead if not verified.	Publish only accurate, defensible figures. Otherwise remove counters.
No FAQ section	Important objections and common questions remain unanswered.	Add a visible FAQ section with concise, useful answers.
Weak internal linking	The page does not fully connect cloud services to networking, cabling, managed WiFi and support.	Add contextual links throughout the page and a related-services section.
Generic testimonial wording	References to WiFi and CCTV do not specifically prove cloud expertise.	Use cloud/Microsoft-specific case studies when available. Never fabricate reviews.
Brand-asset risk	Microsoft logos and app icons cannot be used decoratively without following Microsoft guidance.	Use approved/licensed assets or custom CMAXX diagrams. Do not imply Microsoft endorsement or partner status.

2.4 Wording that must not appear without qualification

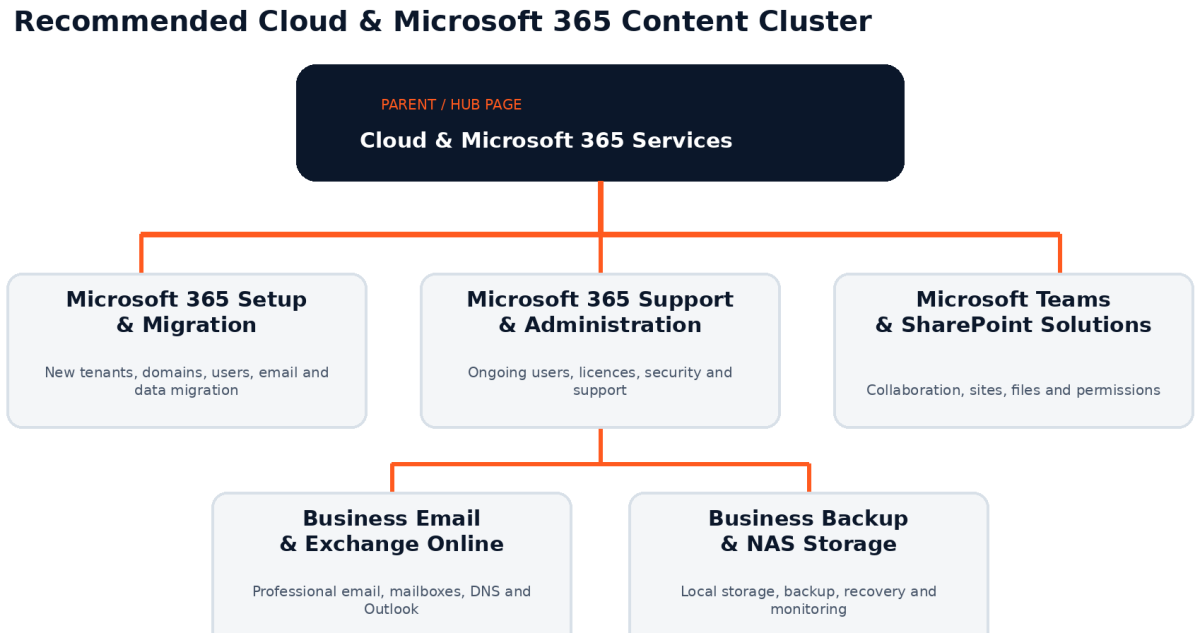

Remove or rewrite these claims

"Zero downtime", "No data loss", "POPIA compliant", "Guaranteed Google ranking", "Guaranteed uptime", "Enterprise-grade security included" and "Microsoft Partner" must not be used as blanket statements. Use qualified, accurate wording and only publish credentials that CMAXX can prove.

3 Final Information Architecture and URL Structure

Parent-child relationships, navigation, breadcrumbs and page naming.

3.1 Recommended content cluster

The parent page introduces the full service category. Each child page focuses on a distinct problem, has its own keyword target and links back to the parent and relevant siblings.

3.2 URLs, titles and H1s

Page	Recommended URL	SEO title	H1
Parent	/cloud-microsoft-365/	Microsoft 365 & Cloud Services Gauteng | CMAXX	Cloud & Microsoft 365 Services for Gauteng Businesses
Setup & Migration	/cloud-microsoft-365/microsoft-365-setup-migration/	Microsoft 365 Setup & Migration Gauteng | CMAXX	Microsoft 365 Setup & Migration for Gauteng Businesses
Support	/cloud-microsoft-365/microsoft-365-support/	Microsoft 365 Support Gauteng | CMAXX	Microsoft 365 Support & Administration for Gauteng Businesses
Teams & SharePoint	/cloud-microsoft-365/teams-sharepoint/	Microsoft Teams & SharePoint Services Gauteng | CMAXX	Microsoft Teams & SharePoint Solutions for Gauteng Businesses
Business Email	/cloud-microsoft-365/business-email-exchange-online/	Business Email & Exchange Online Gauteng | CMAXX	Business Email & Exchange Online Services for Gauteng Businesses
Backup & NAS	/cloud-microsoft-365/business-backup-nas/	Business Backup & NAS Storage Gauteng | CMAXX	Business Backup & NAS Storage Solutions for Gauteng Businesses

3.3 Navigation rules

- Keep "Cloud & Microsoft 365" as the main Services navigation item.
- The five child pages may appear in a dropdown submenu, but they do not all need to be top-level menu items.
- Every service card on the parent page must be a real crawlable HTML link using an <a href> element.
- Use descriptive link text such as "Explore Microsoft 365 Setup & Migration", not only "Learn more" or "Click here".
- Use breadcrumbs on all child pages: Home > Services > Cloud & Microsoft 365 > [Current Service].
- Link every child page back to the parent page in the introduction and breadcrumb, then link contextually to relevant sibling services.

3.4 WordPress parent-child setup

Create the five service pages as children of the existing Cloud & Microsoft 365 page in WordPress. Use the slugs shown above, keep the current parent URL, and set permanent 301 redirects if any test URLs or previous slugs are replaced. Submit all final URLs in the XML sitemap and verify that they are indexable.

Avoid doorway pages

Do not duplicate the same Microsoft 365 page for every suburb or city. Use one strong Gauteng service page, a genuine Areas We Serve page and unique location content only where CMAXX can provide meaningful local evidence, projects or service details.

4 Audience, Positioning and Conversion Strategy

Who the page is for, what it should communicate and what action it should drive.

4.1 Primary target customer

The page should primarily serve Gauteng businesses that need professional email, cloud collaboration, user administration, data storage or backup but do not have a full internal IT department. The language must be understandable to a business owner, office manager or operations manager while still demonstrating technical competence to an IT decision-maker.

- Small and medium businesses, from a few users to larger multi-user or multi-site teams, subject to the confirmed service scope.
- Professional services, property management, education and training, hospitality, retail, construction, non-profit organisations, churches and multi-site businesses.
- New businesses that need domain email, users and Microsoft 365 set up correctly.
- Existing businesses moving from cPanel/IMAP email, Google Workspace, another Microsoft tenant or local file storage.
- Businesses with poor Teams/SharePoint structure, uncontrolled permissions or duplicated files.
- Businesses needing local shared storage, backup monitoring and recovery planning.

4.2 Positioning statement

RECOMMENDED POSITIONING

Core message: CMAXX helps Gauteng businesses set up, migrate, secure and manage Microsoft 365, business email, collaboration tools and backup systems properly - from the cloud service through to the network that supports it.

Differentiator: CMAXX combines cloud administration with real-world WiFi, switching, cabling and network infrastructure expertise.

Tone: Professional, practical, educational, local and trustworthy. Avoid exaggerated enterprise language and unexplained acronyms.

4.3 Primary conversions

Visitor need	Primary CTA	Secondary CTA
New setup or migration	Request a Microsoft 365 Migration Assessment	Book a Cloud Consultation
Ongoing admin/support	Get Microsoft 365 Support	Discuss a Monthly Support Plan
Teams/SharePoint problem	Book a Collaboration Assessment	Request a Permissions Review
Business email	Set Up Professional Business Email	Request an Email Migration Quote

Visitor need	Primary CTA	Secondary CTA
Backup/NAS	Book a Backup & Storage Assessment	Discuss a NAS Solution

4.4 Lead form fields

- Full name
- Company name
- Business email
- Telephone or WhatsApp number
- Approximate number of users
- Current email or cloud platform
- Service required
- Preferred contact method
- Brief description of the problem or project

Conversion requirement

Use the same clear CTA language across desktop and mobile. Track form submissions, click-to-call, email clicks and WhatsApp clicks in analytics. Do not hide the main contact options behind a generic contact page only.

5 SEO, Internal Linking and Technical Requirements

How the pages should be built for people, crawling, relevance and local discovery.

5.1 Parent-page keyword and search-intent plan

Element	Recommendation
Primary keyword theme	Microsoft 365 services Gauteng
Secondary themes	Microsoft 365 support Johannesburg; cloud services Gauteng; Microsoft 365 migration; Teams and SharePoint administration; business email setup; NAS backup solutions
Search intent	Commercial investigation and service enquiry
SEO title	Microsoft 365 & Cloud Services Gauteng | CMAXX
Meta description	Microsoft 365 setup, email migration, Teams, SharePoint, ongoing support, business backup and NAS solutions for Gauteng businesses.
Canonical URL	https://www.cmaxxwifisolutions.co.za/cloud-microsoft-365/
Breadcrumb	Home > Services > Cloud & Microsoft 365 Services

5.2 On-page SEO requirements

- Use one H1 only. Use logical H2 and H3 headings that match the actual content hierarchy.
- Place the main service and location naturally in the title, H1, introduction and selected headings without repeating keywords unnaturally.
- Write for customer understanding first. Each section must answer a real question or decision, not simply add search terms.
- Use descriptive image file names and useful alt text. Do not keyword-stuff alt text or repeat captions.
- Add a short, unique meta description for every page. Do not use the same title or description across the cluster.
- Add a canonical tag, index/follow status, XML-sitemap inclusion and clean status code for every final URL.

- Use LocalBusiness/Organisation structured data site-wide and BreadcrumbList structured data on the cluster pages.
- FAQ content should be visible to users. FAQPage markup may be added only if technically valid, but do not promise FAQ rich results because Google limits their visibility.
- Optimise Core Web Vitals: compressed WebP/AVIF images, responsive sizes, lazy-loading below the fold, limited scripts and no heavy auto-playing media.
- Verify the final pages in Google Search Console and submit the sitemap after launch.

5.3 Internal-linking plan for the parent page

Placement	Recommended anchor text	Destination	Purpose
Hero/introduction	professional business WiFi and network infrastructure	/wifi-network-solutions/	Connect cloud performance to the underlying network.
Migration section	Microsoft 365 Support & Administration	/cloud-microsoft-365/microsoft-365-support/	Move visitors from project work to ongoing support.
Teams section	Microsoft Teams & SharePoint Solutions	/cloud-microsoft-365/teams-sharepoint/	Send high-intent readers to the specialist page.
Email section	Business Email & Exchange Online	/cloud-microsoft-365/business-email-exchange-online/	Capture business-email searches and enquiries.
NAS section	structured network cabling	/infrastructure-cabling/	Explain that NAS performance and reliability depend on good network infrastructure.
NAS section	Business Backup & NAS Storage	/cloud-microsoft-365/business-backup-nas/	Send readers to the specialist storage page.
Related services	Managed WiFi Solutions	/managed-wifi/	Connect cloud services to recurring network management.
Related services	CCTV & Security Solutions	/cctv-security-solutions/	Cross-link where backup, networking or secure remote access are relevant.
Service areas	Areas We Serve	/areas-we-serve/	Support local relevance without duplicating city pages.
Final CTA	Contact CMAXX WiFi Solutions	/contact/	Provide a clear final conversion path.

5.4 Content-length guidance

There is no universal ideal word count. The parent page should be comprehensive enough to answer the main questions without duplicating each child page. As a practical build target, use approximately 2,800 to 4,000 useful words on the parent page and approximately 1,800 to 3,000 unique words on each child page, adjusted according to actual scope and customer need.

> **SEO expectation**
>
> The purpose of this structure is to improve relevance, crawlability, topical depth and conversion. It cannot guarantee a specific ranking position. Ranking also depends on competition, technical quality, Google Business Profile signals, reviews, links, content freshness, service evidence and overall website authority.

6 Parent Page: Full Website-Ready Structure and Copy

Exact section order, headings, copy, calls to action and FAQ content for /cloud-microsoft-365/.

Developer instruction

Implement the sections below in this order. The labels such as H1, H2, eyebrow and CTA are implementation notes and should not appear as labels on the live website. Copy may be lightly edited for brand voice, but do not remove the educational distinctions, scope qualifications, FAQs or internal links.

6.1 Page wireframe and section order

Order	Section	Purpose
1	Breadcrumb and hero	Service promise, location, primary CTA and secondary CTA
2	Trust/benefit strip	Local support, planned migration, business-focused setup, ongoing administration
3	Microsoft 365 explained	Plain-language tool comparison
4	Five service cards	Clickable links to each child page
5	Which service do you need?	Scenario-to-service decision table
6	Setup and migration overview	Detailed scope and expectations
7	Business email overview	Exchange Online, domain and mailboxes
8	Teams, SharePoint and OneDrive	Differences, structure and administration
9	Ongoing Microsoft 365 support	Users, licences, security and managed support
10	NAS storage and backup	Local storage, RAID, 3-2-1 and recovery
11	Security and POPIA responsibilities	Accurate, qualified wording
12	Implementation process	Seven-step customer journey
13	Industries and use cases	Relevant business examples
14	Why choose CMAXX	Differentiators and trust
15	Related services and service areas	Internal links and Gauteng relevance
16	FAQs	Visible, concise answers
17	Final CTA and enquiry form	Strong conversion close

6.2 Hero section

WEBSITE-READY HERO COPY

Eyebrow: BUSINESS CLOUD, EMAIL & COLLABORATION

H1: Cloud & Microsoft 365 Services for Gauteng Businesses

Lead paragraph: CMAXX helps Gauteng businesses plan, set up, migrate, secure and manage Microsoft 365 - including business email, users, Teams, SharePoint, OneDrive and backup solutions. Whether you are moving from another provider or improving an existing environment, we deliver a structured setup with support before, during and after go-live.

Primary CTA: Book a Microsoft 365 Consultation

Secondary CTA: Request a Migration Assessment

Reassurance line: Local Gauteng support | Planned migrations | Business-focused configuration | Ongoing administration available

Hero design note

Use a clear business-focused image or custom CMAXX cloud/network diagram. Do not use decorative Microsoft application icons unless permitted by Microsoft brand guidelines. Do not use unverified counters in the hero.

6.3 Introduction: make Microsoft 365 work properly for your business

WEBSITE-READY COPY

H2: Make Microsoft 365 Work Properly for Your Business

Paragraph 1: Microsoft 365 is more than Word, Excel and email. It is a connected business platform for communication, file storage, teamwork, identity and administration. When it is planned properly, your staff can work from the office, home or different locations while using the same approved accounts, files and collaboration tools.

Paragraph 2: When it is set up poorly, businesses often experience duplicated files, unmanaged users, weak passwords, confusing permissions, licence waste, email problems and uncertainty about where company data is stored. CMAXX helps you select the right approach, configure the environment, move existing data carefully and provide ongoing support.

Supporting line: Our service covers the cloud environment and, where required, the WiFi, switching and structured network infrastructure that staff rely on to access it.

- Professional business email using your company domain
- User accounts, licences, permissions and security settings
- Microsoft Teams, SharePoint and OneDrive configuration
- Email, calendar, contact and file migration
- Local NAS storage and layered backup options
- Ongoing Microsoft 365 administration and support

6.4 Educational section: Microsoft 365 in plain language

SECTION HEADING AND INTRODUCTION

H2: Microsoft 365 Explained in Plain Language

Intro: The different Microsoft 365 tools work together, but they are not interchangeable. CMAXX helps your business use each tool for the right purpose and keeps permissions, ownership and access clear.

Tool	What it is	Best used for
Exchange Online	Business email, calendars and contacts hosted in Microsoft 365.	Professional company email, shared calendars, shared mailboxes and mail administration.
Outlook	The email and calendar application used on computers, browsers and mobile devices.	Reading and sending email, scheduling meetings and managing calendars.
OneDrive	A user's individual cloud work area.	Drafts, personal working files and files not yet ready for a wider team.
SharePoint	Organisation-owned team sites, document libraries, lists and shared information.	Department files, controlled document libraries, team content and structured sharing.
Microsoft Teams	The collaboration interface for chat, meetings, calls, channels and files.	Team communication and project collaboration. Channel files are connected to SharePoint.
Microsoft 365 Apps	Word, Excel, PowerPoint and other applications included according to the selected plan.	Creating and editing business documents across supported devices.
Microsoft Entra ID	The identity and sign-in service behind Microsoft 365 accounts.	Users, groups, authentication and access control. Available controls depend on licensing.

Important: Microsoft 365 plan features and availability can change. The selected licence must be confirmed against the customer's actual needs before publishing a quotation or service scope.

6.5 Five service cards

Service card	Card description	Button text
Microsoft 365 Setup & Migration	Set up your tenant, domain, users and security, then migrate email, calendars, contacts and files through a planned, validated process.	Explore Microsoft 365 Setup & Migration
Microsoft 365 Support & Administration	Get ongoing help with users, licences, password and MFA issues, shared mailboxes, groups, permissions, security settings and day-to-day administration.	Explore Microsoft 365 Support
Microsoft Teams & SharePoint Solutions	Create a practical collaboration structure with the right teams, channels, sites, document libraries, ownership rules and access permissions.	Explore Teams & SharePoint Solutions
Business Email & Exchange Online	Set up professional company email, domain records, mailboxes, aliases, shared mailboxes, Outlook and mobile access.	Explore Business Email Services
Business Backup & NAS Storage	Combine local shared storage with structured backup, off-site copies, monitoring and recovery planning for important business data.	Explore Backup & NAS Solutions

Card-link requirement

The whole card and the button must link to the relevant child page. Use real HTML links with descriptive anchor text. Cards must stack cleanly on mobile and remain keyboard accessible.

6.6 Decision guide: which service do you need?

SECTION HEADING AND INTRODUCTION

H2: Which Cloud or Microsoft 365 Service Do You Need?

Intro: You do not need to know the technical answer before contacting CMAXX. Start with the business problem below and we will assess the most suitable service and licensing approach.

Business need	Best starting service
We are a new business and need professional email.	Business Email & Exchange Online plus Microsoft 365 Setup
We want to move from cPanel, IMAP, Gmail or another provider.	Microsoft 365 Setup & Migration
Our users, licences and security settings are not being managed.	Microsoft 365 Support & Administration
Staff cannot find the latest file and permissions are confusing.	Microsoft Teams & SharePoint Solutions
We need shared local storage for large files or office workflows.	Business Backup & NAS Storage
We need local storage plus an off-site or cloud backup copy.	Business Backup & NAS Storage with a layered backup design
Our cloud tools are slow or unreliable in the office.	Microsoft 365 support plus a WiFi and network assessment
An employee is leaving and we need to secure and transfer access.	Microsoft 365 Support & Administration

6.7 Microsoft 365 setup and migration overview

WEBSITE-READY COPY

H2: Microsoft 365 Setup & Migration

Paragraph 1: A successful Microsoft 365 migration starts before any mailbox or file is moved. CMAXX first reviews your current email, users, domains, file locations, device requirements and security needs. We then recommend the appropriate Microsoft 365 setup and define what will move, what will remain, who needs access and how the cutover will be handled.

Paragraph 2: Migration scope may include email, calendars, contacts, user accounts, shared mailboxes and business files. Complex items such as legacy applications, large archives, Teams chats, custom SharePoint permissions or tenant-to-tenant moves require a separate technical assessment.

CTA: Request a Microsoft 365 Migration Assessment

What the setup may include

- Current-environment discovery and migration planning
- Microsoft 365 tenant setup or review

- Licence selection and provisioning assistance
- Company-domain verification and DNS configuration
- User, group, mailbox, shared-mailbox and alias setup
- Email, calendar, contact and file migration where compatible
- Multi-factor authentication and security-baseline configuration
- Outlook, browser and supported mobile-device setup
- Testing, cutover, validation, user orientation and handover
- Ongoing administration after migration

Migration expectation wording

Use: "Carefully planned migrations designed to minimise disruption and reduce the risk of data loss." Do not use unconditional claims of zero downtime or zero data loss. Timelines must be confirmed after the audit because they depend on user count, data volume, source platform, internet speed and complexity.

6.8 Business email and Exchange Online overview

WEBSITE-READY COPY

H2: Professional Business Email with Exchange Online

Paragraph 1: Give your staff professional email addresses using your company domain and manage mailboxes, calendars and contacts from one business platform. CMAXX can help configure Exchange Online, connect your domain, create users and shared mailboxes, and set up Outlook and supported mobile devices.

Paragraph 2: Where required, we can also assist with mailbox migration, aliases, distribution groups, email authentication records and mail-flow testing. Available security, archiving and retention features depend on the selected Microsoft 365 or Exchange licence.

CTA: Explore Business Email & Exchange Online

- Company-domain email addresses
- User mailboxes and shared mailboxes
- Email aliases and distribution groups
- Calendar and contact synchronisation
- Outlook and mobile-device configuration
- Domain and DNS record configuration
- SPF, DKIM and DMARC assistance where included in scope
- Mailbox migration and post-migration testing

6.9 Teams, SharePoint and OneDrive overview

WEBSITE-READY COPY

H2: Microsoft Teams, SharePoint and OneDrive - Set Up for the Way Your Team Works

Paragraph 1: Teams, SharePoint and OneDrive work together, but each has a different role. Teams gives staff a place to chat, meet and work in channels. SharePoint provides the organisation-owned sites and document libraries behind team collaboration. OneDrive is better suited to an individual user's working files and personal drafts.

Paragraph 2: CMAXX can help organise teams, channels, document libraries, folders, owners, members and external access so staff know where information belongs and who can see it. A clear structure reduces duplicated files, uncontrolled sharing and the risk of important documents remaining in one employee's personal storage.

CTA: Explore Microsoft Teams & SharePoint Solutions

Configuration and administration may include

- Teams and channel structure aligned to departments or projects
- SharePoint sites and document libraries
- Owners, members, visitors and permission groups
- Guest access and external-sharing controls

- File naming, folder structure and document ownership guidance
- Version history and recovery settings where supported
- Migration from file shares, local folders or other storage by assessment
- Basic workflow or approval configuration where included in scope
- User orientation and administrator handover

Scope boundary

Do not advertise advanced SharePoint development, custom applications, complex Power Automate solutions, records management or enterprise governance unless CMAXX has confirmed that these services are available and can be supported.

6.10 Ongoing Microsoft 365 support and administration

WEBSITE-READY COPY

H2: Ongoing Microsoft 365 Support & Administration

Paragraph 1: Microsoft 365 needs ongoing administration as staff join, change roles, leave the business or require access to new tools. CMAXX provides practical support for day-to-day user, licence, email, access and collaboration requirements.

Paragraph 2: Support can be provided for defined once-off tasks or as an ongoing managed service, depending on the size of the business and the level of response, monitoring and administration required.

CTA: Get Microsoft 365 Support

- User onboarding, role changes and offboarding
- Licence assignment, reassignment and usage review
- Password, sign-in and multi-factor authentication assistance
- Shared mailboxes, aliases, groups and distribution lists
- Teams, SharePoint and OneDrive access administration
- Account-compromise response and access containment
- Basic security-setting and sharing-policy administration
- Outlook, browser and supported device assistance
- Administrative documentation and ongoing support planning

6.11 NAS storage and local backup overview

WEBSITE-READY COPY

H2: Business Backup & NAS Storage Solutions

Paragraph 1: A Network Attached Storage device, commonly called a NAS, is a dedicated storage system connected to your business network. It can provide central shared folders, user access controls, fast local file access and automated backup jobs for computers or servers.

Paragraph 2: A NAS is not automatically a complete backup. RAID can help keep a storage system available after certain drive failures, but it does not protect against every risk, including accidental deletion, ransomware, theft, fire or a badly configured synchronisation job. Important data should be protected with separate copies and a tested recovery plan.

Paragraph 3: CMAXX can design a practical combination of local NAS storage, cloud or off-site backup, permissions, monitoring, power protection and restore testing according to the value and size of your data.

CTA: Explore Business Backup & NAS Storage

Component	Main purpose	Important limitation
OneDrive / SharePoint	Cloud access, collaboration and sharing	Internet-dependent access; governance and backup requirements still need planning

Component	Main purpose	Important limitation
NAS	Fast local shared storage and local backup jobs	Requires hardware, secure configuration, monitoring and separate backup copies
Backup	A separate recoverable copy of important data	Must be scheduled, protected, retained and tested
RAID	Drive redundancy and availability within a storage system	Not a replacement for backup

A business NAS and backup project may include

- Storage and capacity assessment
- Synology, QNAP or suitable NAS platform selection
- Business-grade drives and appropriate RAID design
- Shared folders, users, groups and permissions
- Computer, server or file-share backup jobs
- Off-site, cloud or offline backup copy where required
- Backup encryption and access controls where supported
- UPS and safe-shutdown planning
- System alerts, health checks and storage monitoring
- Restore testing and recovery documentation

Educational message to feature prominently

RAID is not backup. A strong solution separates live data from backup copies and keeps at least one protected copy away from the primary system. CMAXX should explain the 3-2-1 principle in customer-friendly language without presenting it as the only possible architecture.

6.12 Security and POPIA responsibilities

WEBSITE-READY COPY

H2: Security-Focused Configuration That Supports Your POPIA Responsibilities

Paragraph 1: Microsoft 365, access controls, backup and secure administration can support your organisation's information-security and privacy responsibilities. However, no cloud platform, licence or installation makes a business automatically POPIA compliant.

Paragraph 2: The responsible organisation must still decide why personal information is processed, who may access it, how long it is retained, how incidents are handled and what policies and staff practices apply. CMAXX can help configure technical controls within the agreed service scope, while legal and compliance decisions remain the customer's responsibility.

- Multi-factor authentication and secure sign-in practices
- Least-privilege administrator roles
- User onboarding and prompt offboarding
- Controlled external sharing and permission reviews
- Retention, recovery and backup configuration where licensed and scoped
- Device and endpoint controls where included in the selected licence and service
- Administrative documentation and incident-escalation contacts

Do not state or imply that CMAXX provides legal certification of POPIA compliance unless a separate, qualified compliance service is formally offered.

6.13 Implementation process

SECTION HEADING AND INTRODUCTION

H2: Our Microsoft 365, Cloud and Backup Implementation Process

Intro: Every project is scoped according to the number of users, current systems, data volume, business risk and support requirements. The following process gives customers a clear view of what to expect.

Step	Stage	What happens
1	Consultation & Discovery	We identify the business problem, users, current platforms, domains, devices, data locations and desired outcome.
2	Audit & Risk Review	We review access, licences, storage, migration constraints, permissions, backup gaps and internet/network readiness.
3	Solution & Migration Plan	CMAXX defines the recommended licence approach, scope, responsibilities, timeline, cutover method and exclusions.
4	Tenant, Email or NAS Configuration	The target environment is prepared, including domains, users, groups, permissions, storage, security and backup settings.
5	Pilot, Backup & Pre-Checks	Where appropriate, we test with selected users or data, confirm backups and validate the target before the main change.
6	Migration, Cutover & Validation	Data and services are moved according to the plan, then tested with the customer and corrected where required.
7	Training, Handover & Support	Users receive practical orientation, administrators receive documentation and ongoing support is agreed.

6.14 Industries and use cases

WEBSITE-READY COPY

H2: Cloud and Microsoft 365 Services for Different Types of Gauteng Businesses

Intro: CMAXX adapts the solution to the way each organisation communicates, stores information and supports staff. Typical use cases include:

Business type	Typical requirement
Professional services	Secure business email, controlled client documents, shared calendars and remote collaboration.
Property management	Shared tenant/property files, mobile access, team communication and multi-site support.

Business type	Typical requirement
Schools and training organisations	Staff accounts, shared resources, controlled document access and backup planning.
Hospitality and venues	Back-office email, shared administration files, resilient connectivity and local backup.
Construction and field teams	Mobile file access, project channels, shared documents and controlled external collaboration.
Non-profits and churches	Professional email, structured file sharing, user administration and cost-conscious licensing guidance.
Multi-site businesses	Consistent users, permissions, collaboration and support across branches.

6.15 Why choose CMAXX WiFi Solutions?

WEBSITE-READY COPY

H2: Why Gauteng Businesses Choose CMAXX

Intro: Your cloud platform only works well when the user accounts, devices and underlying network are also working properly. CMAXX provides one practical point of support across Microsoft 365, business connectivity, WiFi and network infrastructure.

- Local Gauteng service and remote-support capability
- Cloud administration supported by networking and WiFi expertise
- Business-focused setup rather than a one-size-fits-all installation
- Clear scope, documentation, testing and handover
- Once-off projects and ongoing managed-support options
- Scalable solutions for growing teams and multiple sites
- B-BBEE Level 1 and COIDA-registered business credentials where relevant and current

Proof requirement

Use actual project photographs, anonymised screenshots, case studies, credentials and reviews only where CMAXX has permission and evidence. Do not fabricate Microsoft 365 statistics, migration volumes, testimonials or partner badges.

6.16 Related CMAXX services and internal links

H2: Microsoft 365 and Cloud Support Across Gauteng

Paragraph: CMAXX supports businesses in Midrand, Johannesburg, Sandton, Centurion, Pretoria, Randburg, Fourways, Bryanston, Kempton Park, Edenvale, Roodepoort and surrounding Gauteng areas. Many Microsoft 365 administration tasks can be handled remotely, while migrations, network assessments and NAS installations may include on-site work where required.

6.18 Parent-page FAQs - full copy

Use the following questions and answers in a visible FAQ accordion or stacked layout. The content must remain present in the page HTML, readable without JavaScript failure and accessible by keyboard. Keep answers concise on the live page and link to child pages where more depth is useful.

What is Microsoft 365?

Microsoft 365 is a cloud productivity platform that can include business email, calendars, file storage, Microsoft Teams, SharePoint, OneDrive and Office applications, depending on the selected licence. It also provides identity and administration tools for managing users and access.

Is Office 365 the same as Microsoft 365?

Office 365 was the earlier name used for many cloud productivity plans. Microsoft 365 is now the broader name for the service family, which may include Office applications, cloud services, identity, security and device-management features depending on the plan.

Which Microsoft 365 plan does my business need?

The correct plan depends on whether users need desktop Office applications, business email, Teams, advanced security, device management, archiving or other features. CMAXX can assess your requirements and recommend a suitable approach. Features and prices must always be confirmed against current Microsoft information.

Can we keep our existing company email addresses?

In most migrations, a business can keep the same email addresses if it controls the domain. CMAXX verifies the domain, creates the target users and plans the DNS and mailbox changes so new mail is directed to the new service at the correct stage.

What systems can be migrated to Microsoft 365?

Possible source systems include cPanel or other IMAP mailboxes, Google Workspace, another Microsoft 365 tenant, on-premises Exchange and local file shares. The available migration method and the data that can be moved depend on the source system, permissions and project scope.

What data can be migrated?

A standard project may include email, calendars, contacts, user accounts and business files. Teams chats, complex SharePoint permissions, large archives, unsupported file types and third-party application data may require separate tools, licensing or specialist scope.

How long does a Microsoft 365 migration take?

The timeline depends on the number of users, data volume, source platform, internet speed, domain access, complexity and the required cutover method. CMAXX confirms the expected timeline after discovery and does not use a one-day promise for every project.

Will our email stop working during migration?

CMAXX plans the migration to reduce disruption, but a short interruption or user reconfiguration may still be required during the cutover. The exact approach is agreed in advance and validated after DNS, mailbox and device changes.

Can any provider guarantee zero data loss?

No responsible provider should present zero risk as an unconditional guarantee. A professional process reduces risk through discovery, backups, pilot testing, staged migration, validation and clear responsibilities. Important source data should remain protected until the migration is accepted.

Do we need to buy new computers?

Not necessarily. CMAXX checks operating-system, browser and application compatibility. Some users can work through web applications, while desktop applications and advanced security features depend on the selected licence and device capability.

Can staff use Microsoft 365 on phones, tablets and Mac computers?

Microsoft 365 supports a range of browsers, mobile devices and Mac or Windows computers, subject to current application support and the organisation's security policies. CMAXX can assist with supported device setup within the agreed scope.

What is a Microsoft 365 tenant?

A tenant is the organisation's Microsoft 365 cloud environment. It contains the company's verified domains, users, groups, mailboxes, licences, policies, SharePoint sites, Teams and administrative settings.

What is the difference between Teams, SharePoint and OneDrive?

Teams is the collaboration interface for chat, meetings and channels. SharePoint stores organisation-owned team content and document libraries. OneDrive is primarily the individual user's cloud work area. A good setup defines when staff should use each tool.

Can we control external sharing?

Yes. Sharing settings, guest access, team membership and SharePoint permissions can be configured according to business need. External sharing should be enabled deliberately, reviewed regularly and limited to the people and information that require it.

Does CMAXX set up multi-factor authentication?

Yes, multi-factor authentication can be included in the setup and is strongly recommended for business accounts. The available methods and enforcement options depend on current Microsoft capabilities, licensing and the organisation's security policy.

What should happen when an employee leaves?

The organisation should promptly block sign-in, revoke active sessions where appropriate, preserve or transfer business data, change ownership, remove access and then reassign or remove the licence according to the retention plan. CMAXX can manage this as part of ongoing administration.

What is a NAS?

A NAS is a dedicated storage device connected to the business network. It can provide shared folders, access controls, local file storage and automated backup jobs for approved users and devices.

Is a NAS the same as a backup?

No. A NAS can store backups, but if it is the only copy of the data it is still a single point of failure. Important data should have separate, protected copies, including an off-site, offline or suitably secured cloud copy where required.

Is RAID a backup?

No. RAID can provide drive redundancy and help a storage system remain available after certain disk failures. It does not protect against every threat, including accidental deletion, ransomware, theft, fire, corruption or a failed synchronisation.

Should our business use cloud storage or a NAS?

Many businesses benefit from both. Cloud storage supports remote access and collaboration, while a NAS can provide fast local access, central storage and local backup. CMAXX assesses data size, internet capacity, security, recovery time and budget before recommending an architecture.

Does Microsoft 365 already back up our data?

Microsoft 365 includes service resiliency and several retention or recovery features, but those features are not the same as every business's required backup and recovery plan. Additional backup may be appropriate for faster recovery, longer retention or protection against accidental and malicious changes.

What happens if the internet is offline?

Cloud access will be limited while the internet connection is down, although some applications may retain cached or offline functionality. Local NAS access may remain available inside the office network. Businesses that rely heavily on cloud tools should consider reliable WiFi, network monitoring and an internet failover option.

Does Microsoft 365 make a business POPIA compliant?

No. Microsoft 365 can provide useful security, access and data-management controls, but POPIA compliance also depends on the organisation's lawful purpose, policies, contracts, retention decisions, staff practices, incident response and accountability.

Does CMAXX provide ongoing Microsoft 365 support?

Yes. CMAXX can assist with defined once-off tasks or an ongoing support arrangement covering users, licences, email, MFA, groups, shared mailboxes, permissions, Teams, SharePoint and general administration according to the agreed service scope.

Can CMAXX support businesses with multiple branches or remote staff?

Yes. Microsoft 365 is designed for distributed work, but the identity, device, permission and network approach must be planned. CMAXX can assess multiple sites, remote users, connectivity and support requirements as one coordinated solution.

6.19 Final CTA and enquiry form

WEBSITE-READY FINAL CTA

H2: Plan Your Microsoft 365 Environment Properly from the Start

Paragraph: Whether you need professional business email, a structured migration, ongoing Microsoft 365 administration, better Teams and SharePoint organisation, or a reliable NAS and backup solution, CMAXX will assess your current environment and recommend the right next step.

Primary CTA: Book a Cloud & Microsoft 365 Consultation

Secondary CTA: Call or WhatsApp CMAXX

Form prompt: Tell us how many users you have, what platform you use today and what you need help with.

Final implementation note

The final CTA must include click-to-call and WhatsApp options, a short enquiry form and a response expectation that CMAXX can consistently meet. Do not promise immediate or 24/7 response unless that service is formally available.

7 Five Child Service Page Blueprints

SEO metadata, section order, required scope, FAQs and internal links for each dedicated page.

The blueprints below are not optional supporting notes. They define the minimum content and linking structure for the five child service pages. Each page must have unique copy and a clear conversion goal.

7.1 Microsoft 365 Setup & Migration

Element	Requirement
URL	/cloud-microsoft-365/microsoft-365-setup-migration/
SEO title	Microsoft 365 Setup & Migration Gauteng | CMAXX
Meta description	Plan and migrate business email, users, files and Microsoft 365 services with structured support from CMAXX across Gauteng.
H1	Microsoft 365 Setup & Migration for Gauteng Businesses
Primary keyword theme	Microsoft 365 migration Gauteng
Primary CTA	Use a service-specific assessment or support CTA, not a generic "Get in touch" button.

SAMPLE HERO MESSAGE

H1: Microsoft 365 Setup & Migration for Gauteng Businesses

Lead: Move to Microsoft 365 through a planned, validated process covering your domain, users, email, files, security and handover.

CTA: Book an Assessment / Request a Quote

Mandatory section order

1. Hero with migration-assessment CTA
2. Who this service is for
3. What can be set up in Microsoft 365
4. What can be migrated and what requires separate assessment
5. Source platforms: IMAP/cPanel, Google Workspace, Microsoft tenant, Exchange and file shares
6. Licence and tenant planning
7. Domain verification and DNS changes
8. User, mailbox, shared-mailbox and group setup
9. Security baseline and MFA
10. Seven-step migration process
11. Downtime, risk and customer responsibilities
12. Testing, training and handover
13. Ongoing Microsoft 365 support
14. Related services, service areas, FAQs and final CTA

Required FAQ questions

- Can we keep our existing email addresses?
- Can CMAXX migrate from cPanel, IMAP or Google Workspace?

- Can you move us from one Microsoft 365 tenant to another?
- What data can be migrated?
- How long will the migration take?
- Will users have email downtime?
- Do you perform a backup before migration?
- Will staff need new passwords or MFA registration?
- Can you configure Outlook and mobile devices?
- Can SharePoint, OneDrive and file-server data be moved?
- What access does CMAXX need from the current provider?
- What information is required for a migration quotation?

Required internal links

- Parent Cloud & Microsoft 365 page
- Business Email & Exchange Online
- Microsoft 365 Support & Administration
- Teams & SharePoint Solutions
- WiFi & Network Solutions
- Contact page

> **Unique-content rule**
> The Microsoft 365 Setup & Migration page must not repeat the parent page word for word. Expand the specialist topic with examples, scope, process, limitations and FAQs that directly match the visitor's problem.

7.2 Microsoft 365 Support & Administration

Element	Requirement
URL	/cloud-microsoft-365/microsoft-365-support/
SEO title	Microsoft 365 Support Gauteng | CMAXX
Meta description	Ongoing Microsoft 365 administration for users, licences, email, MFA, Teams, SharePoint and business support across Gauteng.
H1	Microsoft 365 Support & Administration for Gauteng Businesses
Primary keyword theme	Microsoft 365 support Gauteng
Primary CTA	Use a service-specific assessment or support CTA, not a generic "Get in touch" button.

SAMPLE HERO MESSAGE

H1: Microsoft 365 Support & Administration for Gauteng Businesses

Lead: Keep users, licences, email, access and collaboration tools properly managed as your business changes.

CTA: Book an Assessment / Request a Quote

Mandatory section order

1. Hero with support and managed-service CTA
2. What ongoing Microsoft 365 administration means
3. User onboarding, role changes and offboarding
4. Licence assignment, removal and optimisation
5. Password, sign-in and MFA support

6. Exchange Online, mailbox and group administration
7. Teams, SharePoint and OneDrive permissions
8. Security baseline and account-compromise response
9. Supported devices and remote-user assistance
10. Once-off support versus monthly managed support
11. Support scope, exclusions and response expectations
12. Why use a local Gauteng support provider
13. Related services, FAQs and final CTA

Required FAQ questions

- What does Microsoft 365 administration include?
- Can CMAXX add and remove users?
- Can you reassign or review licences?
- Can you reset MFA after a phone is lost or replaced?
- Do you manage shared mailboxes and distribution groups?
- Can you help with a compromised Microsoft 365 account?
- Do you manage Teams and SharePoint permissions?
- Can you support Mac, Windows and mobile users?
- Is support available once-off or monthly?
- Are Microsoft licence costs included in the support fee?
- What are your support hours and response targets?
- Can you support several branches and remote employees?

Required internal links

- Parent Cloud & Microsoft 365 page
- Setup & Migration
- Business Email & Exchange Online
- Teams & SharePoint Solutions
- Managed WiFi Solutions
- Contact page

> **Unique-content rule**
> The Microsoft 365 Support & Administration page must not repeat the parent page word for word. Expand the specialist topic with examples, scope, process, limitations and FAQs that directly match the visitor's problem.

7.3 Microsoft Teams & SharePoint Solutions

Element	Requirement
URL	/cloud-microsoft-365/teams-sharepoint/
SEO title	Microsoft Teams & SharePoint Services Gauteng | CMAXX
Meta description	Teams and SharePoint setup, permissions, document libraries and collaboration support for Gauteng businesses.
H1	Microsoft Teams & SharePoint Solutions for Gauteng Businesses
Primary keyword theme	Teams and SharePoint services Gauteng
Primary CTA	Use a service-specific assessment or support CTA, not a generic "Get in touch" button.

SAMPLE HERO MESSAGE

H1: Microsoft Teams & SharePoint Solutions for Gauteng Businesses

Lead: Create a clear collaboration structure so staff know where files belong, who owns them and who can access them.

CTA: Book an Assessment / Request a Quote

Mandatory section order

1. Hero with collaboration-assessment CTA
2. Teams, SharePoint and OneDrive explained
3. Common problems caused by poor structure
4. Teams, channels, owners and membership design
5. SharePoint sites, libraries, folders and metadata
6. Permissions, guest access and external sharing
7. Document versioning and recovery considerations
8. File migration from local shares or other storage
9. Naming standards, ownership and governance basics
10. Basic workflows and approvals only where confirmed
11. User training and administrator handover
12. Ongoing administration
13. Related services, FAQs and final CTA

Required FAQ questions

- What is the difference between Teams and SharePoint?
- Where are files shared in Teams stored?
- When should staff use OneDrive instead of SharePoint?
- Can departments have different permissions?
- Can external clients or suppliers be given access?
- Can deleted files or older versions be restored?
- Can local file-server or NAS data be migrated?
- Can we use Teams without understanding SharePoint?
- Can CMAXX create a SharePoint intranet?
- Do you provide user training?
- Can you build approval workflows?
- How do Teams and SharePoint support POPIA responsibilities?

Required internal links

- Parent Cloud & Microsoft 365 page
- Setup & Migration
- Microsoft 365 Support
- Business Backup & NAS
- WiFi & Network Solutions
- Contact page

Unique-content rule

The Microsoft Teams & SharePoint Solutions page must not repeat the parent page word for word. Expand the specialist topic with examples, scope, process, limitations and FAQs that directly match the visitor's problem.

7.4 Business Email & Exchange Online

Element	Requirement
URL	/cloud-microsoft-365/business-email-exchange-online/
SEO title	Business Email & Exchange Online Gauteng | CMAXX
Meta description	Professional company email, Exchange Online setup, mailbox migration, shared mailboxes and Outlook support for Gauteng businesses.
H1	Business Email & Exchange Online Services for Gauteng Businesses
Primary keyword theme	business email setup Gauteng
Primary CTA	Use a service-specific assessment or support CTA, not a generic "Get in touch" button.

SAMPLE HERO MESSAGE

H1: Business Email & Exchange Online Services for Gauteng Businesses

Lead: Set up professional company email under your own domain, with structured mailboxes, calendars, Outlook and ongoing administration.

CTA: Book an Assessment / Request a Quote

Mandatory section order

1. Hero with email-setup CTA
2. Why professional domain email matters
3. What Exchange Online is
4. Domain verification and DNS records
5. User mailboxes, shared mailboxes, aliases and groups
6. Outlook, browser and supported mobile-device setup
7. Migration from existing email providers
8. SPF, DKIM and DMARC assistance where scoped
9. Spam, phishing, retention and archiving - licence dependent
10. Email continuity and cutover expectations
11. Ongoing email administration
12. Related services, FAQs and final CTA

Required FAQ questions

- Can we use our existing company domain?
- Can we keep our current email addresses?
- Can CMAXX migrate from Gmail, cPanel or IMAP?
- What is the difference between a user mailbox and shared mailbox?
- Can one mailbox have several aliases?
- Can you create distribution lists or Microsoft 365 groups?
- Will Outlook and mobile phones be configured?
- Do you configure SPF, DKIM and DMARC?
- What anti-spam and phishing protection is included?
- Can deleted email be recovered?
- What happens to the old email service after migration?
- Does the quotation include Microsoft licence fees?

Required internal links

- Parent Cloud & Microsoft 365 page
- Setup & Migration
- Microsoft 365 Support
- Teams & SharePoint Solutions
- Managed WiFi or WiFi & Network Solutions
- Contact page

Unique-content rule

The Business Email & Exchange Online page must not repeat the parent page word for word. Expand the specialist topic with examples, scope, process, limitations and FAQs that directly match the visitor's problem.

7.5 Business Backup & NAS Storage Solutions

Element	Requirement
URL	/cloud-microsoft-365/business-backup-nas/
SEO title	Business Backup & NAS Storage Gauteng | CMAXX
Meta description	NAS storage, local backup, off-site copies, monitoring and recovery solutions for Gauteng businesses.
H1	Business Backup & NAS Storage Solutions for Gauteng Businesses
Primary keyword theme	NAS storage and backup Gauteng
Primary CTA	Use a service-specific assessment or support CTA, not a generic "Get in touch" button.

SAMPLE HERO MESSAGE

H1: Business Backup & NAS Storage Solutions for Gauteng Businesses

Lead: Protect important business files with properly designed local storage, backup copies, monitoring and a tested recovery plan.

CTA: Book an Assessment / Request a Quote

Mandatory section order

1. Hero with backup-assessment CTA
2. What a NAS is and when a business needs one
3. NAS versus cloud storage versus backup
4. Why RAID is not backup
5. 3-2-1 backup principle in plain language
6. Storage sizing and growth planning
7. Synology, QNAP and suitable platform selection
8. Drive and RAID design
9. Shared folders, users and permissions
10. Computer, server, NAS-to-cloud and off-site backup options
11. Microsoft 365 backup and retention considerations
12. UPS, monitoring, alerts and maintenance
13. Restore testing and recovery documentation

14. Related services, FAQs and final CTA

Required FAQ questions

- What is a NAS?
- Is a NAS a backup?
- Is RAID a backup?
- How many drives does our business need?
- Should we choose Synology or QNAP?
- Should we use a NAS or cloud storage?
- Can staff access the NAS remotely?
- Can the NAS back up laptops and desktops?
- Can Microsoft 365 data be backed up to a NAS?
- Do we need an off-site or offline copy?
- Why does a NAS need a UPS?
- How are ransomware risks reduced?
- How often should restores be tested?
- Can a NAS also support CCTV storage?

Required internal links

- Parent Cloud & Microsoft 365 page
- Teams & SharePoint Solutions
- Microsoft 365 Support
- Infrastructure & Cabling
- WiFi & Network Solutions
- CCTV & Security Solutions
- Contact page

Unique-content rule

The Business Backup & NAS Storage Solutions page must not repeat the parent page word for word. Expand the specialist topic with examples, scope, process, limitations and FAQs that directly match the visitor's problem.

8 Design, UX, Accessibility and Brand Requirements

How the rebuilt pages should look and behave on desktop and mobile.

8.1 Visual direction

- Use the CMAXX navy, orange, white and light-grey palette consistently.
- Keep content widths comfortable for reading. Use a narrower text column inside full-width section backgrounds rather than stretching paragraphs across the screen.
- Use real project photography, carefully licensed business imagery or custom diagrams. Avoid generic futuristic server images where they do not explain the service.
- Use icons only when they improve comprehension. Do not use Microsoft product icons as decorative page branding without confirming permitted use.
- Use strong spacing and section hierarchy. Avoid long unbroken walls of text and avoid hiding essential content inside sliders.
- Use comparison tables and short callout panels for technical education, especially Teams versus SharePoint versus OneDrive and NAS versus backup versus RAID.

8.2 Microsoft brand and relationship rules

Microsoft naming and badge control

CMAXX may describe services relating to Microsoft 365, Teams, SharePoint, OneDrive, Outlook and Exchange Online. Do not use a Microsoft logo, app icon, partner badge or wording that implies sponsorship, certification or endorsement unless CMAXX has the relevant permission and can provide the approved asset.

8.3 Accessibility requirements

- One clear H1 per page and a logical H2/H3 heading hierarchy.
- Colour contrast that meets WCAG expectations for text and buttons.
- Keyboard-accessible menus, accordions, forms and cards.
- Visible focus states for links and controls.
- Descriptive button and link text.
- Alt text that describes the purpose of useful images; decorative images should have empty alt attributes.
- Form labels that remain visible and clear error messages.
- No important text embedded only inside an image.
- FAQ accordions must expose the question and answer to assistive technology.

8.4 Mobile and performance requirements

- Service cards must stack cleanly and maintain readable tap targets.
- Tables should become scrollable or convert to accessible stacked cards on small screens.
- Hero text and CTA buttons must appear above excessive decorative imagery.
- Compress images and supply responsive image sizes.
- Lazy-load images below the fold but not the main hero image if it harms Largest Contentful Paint.
- Avoid heavy animations, auto-playing video backgrounds and unnecessary third-party scripts.
- Test phone, WhatsApp and form interactions on actual mobile devices.

8.5 Suggested image plan

Section	Recommended visual	Purpose
Hero	Real Gauteng business/CMAXX technician or a custom cloud-and-network diagram	Professional business context, not decorative app-logo collage
Microsoft 365 explainer	Custom CMAXX diagram showing email, Teams, SharePoint, OneDrive and users	Educational relationship between tools
Migration	Simple seven-step process illustration	Customer journey and risk reduction
Teams/SharePoint	Custom collaboration and document-ownership diagram	Where files live and how permissions work
NAS/backup	Real NAS/cabinet installation or custom 3-2-1 backup diagram	Explain local storage, off-site copy and recovery
Trust	Actual project image, certificate or anonymised case study evidence	Real proof, not fabricated statistics

9 Developer Publishing Checklist

The page is not complete until every item below has been verified.

Content and structure

Status	Verification item
PASS / ACTION	Parent page rebuilt in the required section order.
PASS / ACTION	Five child service pages created with unique copy.
PASS / ACTION	One H1 per page and logical H2/H3 hierarchy.
PASS / ACTION	Absolute claims and duplicated blocks removed.

Status	Verification item
PASS / ACTION	All FAQs visible, accurate and accessible.
PASS / ACTION	No fabricated reviews, counters, case studies or credentials.

Links and navigation

Status	Verification item
PASS / ACTION	Every parent-page service card links to its child page.
PASS / ACTION	Breadcrumbs added to the parent and all child pages.
PASS / ACTION	Contextual internal links added to relevant CMAXX service pages.
PASS / ACTION	No broken links, placeholder links or "#" buttons.
PASS / ACTION	All links use real href attributes and descriptive anchor text.

SEO

Status	Verification item
PASS / ACTION	Unique title tag and meta description on every page.
PASS / ACTION	Canonical URL set correctly.
PASS / ACTION	Pages are indexable and included in XML sitemap.
PASS / ACTION	LocalBusiness/Organisation and Breadcrumb structured data validated.
PASS / ACTION	FAQ markup used only if valid and visible; no rich-result promises.
PASS / ACTION	Search Console and analytics tracking tested after launch.

Performance and accessibility

Status	Verification item
PASS / ACTION	Responsive layout tested on desktop, tablet and mobile.
PASS / ACTION	Images compressed and supplied in modern formats.
PASS / ACTION	Buttons, accordions and forms keyboard accessible.
PASS / ACTION	Colour contrast, labels, focus states and alt text checked.
PASS / ACTION	No large layout shifts, hidden text or text-only images.

Business validation before publishing

Status	Verification item
PASS / ACTION	CMAXX licensing/procurement wording confirmed.
PASS / ACTION	Microsoft Partner or badge status confirmed before any badge is shown.
PASS / ACTION	Supported migration sources and maximum project size confirmed.
PASS / ACTION	Advanced security, Intune, Defender, Purview and automation scope confirmed.
PASS / ACTION	NAS brands, backup provider, support hours and SLA wording confirmed.
PASS / ACTION	B-BBEE and COIDA credentials are current before display.
PASS / ACTION	Response times and support availability are operationally achievable.

Launch gate

Do not launch the cluster until the content, links, mobile layout, forms, tracking, schema, indexability and business claims have been checked on the live domain. The staging URL must not remain indexed after launch.

10 Reference Sources and Accuracy Notes

Official sources used to validate technical, legal and SEO guidance in this brief.

Microsoft product features, licensing and Google search features change over time. The developer and CMAXX should re-check current official documentation when implementing plan-specific claims, structured data and brand assets.

1. Current CMAXX Cloud & Microsoft 365 page
2. Microsoft 365 migration documentation
3. Add users and assign licences in Microsoft 365
4. Connect a business domain and DNS records to Microsoft 365
5. Teams and SharePoint integration
6. Manage settings and permissions when SharePoint and Teams are integrated
7. Set up multi-factor authentication for Microsoft 365
8. Microsoft 365 Backup overview
9. SharePoint data deletion and recovery windows
10. Microsoft 365 business plans and current feature comparisons
11. Microsoft trademark and brand guidelines
12. Protection of Personal Information Act 4 of 2013
13. CISA data-backup guidance and the 3-2-1 principle
14. Synology RAID overview
15. Google: creating helpful, reliable, people-first content
16. Google: internal link and crawlable-link best practices
17. Google: breadcrumb structured data
18. Google: FAQ structured data and current feature availability

19. Google: LocalBusiness structured data

> **Final accuracy principle**
>
> The live website must describe services CMAXX actually offers, can support and can price. Where features depend on Microsoft licensing, source-platform compatibility or customer infrastructure, use clear qualification such as "subject to assessment", "where supported" or "depending on the selected licence".
